REPLY BRIEF

Sir:

The following is intended to reply to certain issues raised in the Examiner's Answer dated January 24, 2007.

Specifically, the Examiner has asserted on page 6 of the Answer that nothing in the applied references is present that would teach away from the present invention. Applicants emphatically disagree with such a position.

In this regard, the present invention has three steps of DAD which are clearly separate process steps. On the contrary, Chang teaches to *split* the charge of chlorine dioxide so that after 5-40 minutes, a second portion of chlorine dioxide is added, after which the treatment lasts further for more than 2 hours. Accordingly, it may be said that Chang has a shorter D step and immediately thereafter a much longer D step. This teaching of Chang most clearly teaches away from having a D step + an A step + a D step.

Thus, the present invention, in which there are even more steps than in Chang process is not contemplated at all by Chang. In fact, Chang teaches that an

intermediate A step is not at all desired. As a result, the applicants maintain that Henricson and Chang cannot be combined in the manner contemplated by the Examiner. As such, reversal of the rejections of record based on such references is in order.

Respectfully submitted,
